ON THE AVI-FAUNA OF PINAL COUNTY, WITH  
REMARKS ON SOME BIRDS OF PIMA AND  
GILA COUNTIES, ARIZONA.

BY W. E. D. SCOTT.

*With annotations by J. A. Allen.*

(Concluded from p. 36.)

217. **Anthus pensilvanicus**. AMERICAN PIPIT. — A not uncommon migrant throughout the region and some probably winter on the plains about Tucson and south of that point. I have records of their occurrence in the Santa Catalina Range, altitude 5000 feet, in October and early November, and in March. It was common in flocks on the San Pedro River in March, 1885, at the mouth of Pepper Sauce Cañon.

[Of the four specimens sent, three are in adult spring plumage. One has the dusky streaks on the breast unusually broad and dark. — J. A. A.]

218. **Oroscoptes montanus**. SAGE THRASHER. — A common fall migrant in the Pinal Mountains; common migrant and winter resident in small numbers on the foothills of the Catalinas up to 3500 feet. My records of its occurrence are December, rare; January, rather common; February, common; March, abundant. In April they begin to leave, and I did not observe any during the other months of the year.

219. **Mimus polyglottos**. MOCKINGBIRD. — A common resident throughout the region up to an altitude of 5000 feet, but more abundant during the
